KEY INSIGHTS

- For the provided data period, total sales are 1.07M with total footfall of 23K, giving a sales-per-footfall of 47.6.
- Central Mall is the top-performing store by sales, followed by City Center and Airport Outlet.
- Monthly trend shows sales are relatively stable, while footfall shows a decline in the latest month available (Jan 2025).
- YoY comparison indicates sales growth is higher than footfall growth, suggesting revenue is improving faster than traffic.
- Data quality is a key risk: only 53.3% of transactions have valid sales values (non-null and non-zero).
- The dashboard includes a data quality view to highlight missing and zero sales records, so stakeholders can interpret KPIs with the right context

RECOMMENDATIONS & AUTHOR DETAILS

1) Improve conversion in high-footfall stores

- Stores with strong footfall but lower sales-per-footfall should be reviewed for conversion drivers such as promotions, product mix, or checkout experience.

2) Replicate what the top store is doing

- Since Central Mall leads in total sales, its strategy (pricing, assortment, campaigns) can be used as a benchmark for other stores and can make it a threshold to hit in coming quarters

3) Track footfall drop impact

- The latest month (Jan 2025) shows a drop in footfall, so monitoring footfall trends alongside sales will help identify whether revenue is being protected through better conversion or higher ticket size.

4) Data quality monitoring

- Continue monitoring missing/zero sales records by store to reduce reporting gaps and improve confidence in KPIs.
